

New Homeowner Maintenance Checklist

A practical first-year rhythm for keeping the essentials visible and on schedule.

PROVIDED BY _____

✓ Every month

- Test smoke and carbon monoxide alarms using their built-in test buttons.
- Check the HVAC filter; replace it when dirty or as the manufacturer recommends.
- Look under sinks and around appliances for leaks, moisture, or damaged hoses.
- Review upcoming maintenance, warranties, and any product-recall notices.

✓ Spring

- Clean gutters and downspouts; make sure water drains away from the home.
- Inspect the roof from the ground for visible damage or missing materials.
- Check caulk, weather seals, exterior drainage, and foundation areas.
- Schedule cooling service; test sump pump and sprinklers if applicable.

✓ Summer

- Keep outdoor HVAC equipment clear; note unusual noise, leaks, or weak airflow.
- Inspect irrigation and adjust watering for the season and local rules.
- Check siding, windows, doors, and exterior wood for moisture entry or wear.
- Review pool equipment if applicable, and record completed work and receipts.

✓ Fall

- Schedule heating-system service before regular seasonal use.
- Clean gutters and inspect door and window weatherstripping.
- Disconnect garden hoses before freezing weather where relevant.
- Schedule chimney/fireplace inspection; test generator backup if applicable.

✓ Winter

- Protect exposed plumbing during freezes using local and manufacturer guidance.
- Check attic areas and ceilings for moisture, staining, or roof leakage.
- Keep dryer exhaust clear; inspect the water heater for leaks or corrosion.
- Update appliance, warranty, cost, and maintenance records.

A NOTE ON SAFETY

This is a general checklist, not an inspection or professional recommendation. Follow manufacturer instructions and local requirements. Use qualified professionals for gas, electrical, roof, chimney, refrigerant, structural, or other work beyond your training and safe access.
